TAZ Ateliers relais EUREKALP ZA Tire-Poix  
38660 St Vincent de Mercuze. France  
TAZ LOV3- Models red, blue and black

CE 0082

EN 12841: 2006 type A, B and C

EN 358: 2018

EN 15151.1 :2012

EN 341 type 2 Class C

Field of apply: Addendum Explanatory a practice under the exception of **one person Weighing up to 150 kgs.**

The effective user instruction must be read and applied. Taz authorize exceptionally exceeding the nominal load indicated in the case of one person up to 150 kg.

### Reminders:

LOV3 has to be redundant with a fall arrest device Type A on ropes, fall arrest on another independent rope. This fall arrest system parallel with its anchor point must always be properly positioned and evacuation must be carried out so as to minimize the risk of falls and fall height.

The system's top anchor must comply with the requirements of EN 795-12 KN and ropes used must comply with the standard EN 1891 Class A in diameter 10-11 mm.

If used on diagonal or taut rope, the lower anchorage must comply with EN795 to 12 KN, if the rupture of it may lead a user to obstacles. In this case, a calculation note must be prepared and conclude with a voltage in the lower use anchorage for 3 KN.

### Warning :

This exceeding weight can cause different standard fails as excessiv force chock and excessiv sliding.

### Do not overpass fall factor 0.1

Use only recommended ropes.

**Not to exceed 1m/s** lowering speed, so as not to cause heating of steel sheaves, which changes the friction thus blocking.

The rope holding hand is necessarily and always active downstream of LOV3 on the rope, adding a **brake friction carabiner**.

**Use a locking secure key** when stopped after descent.

Friction carabiner / On a top anchor

Friction carabiner / On his proper harness

**Secure key** when stopped after descending.
